

TA-PILOT-R

Differential pressure controllers

Pilot operated differential pressure controller with adjustable set-point

Engineering
GREAT Solutions

TA-PILOT-R

The TA-PILOT-R is a high performing differential pressure controller designed to keep a stable differential pressure over the load. With unrivaled accuracy TA-PILOT-R assists in delivering accurate and stable conditions to provide superior control valve authority for modulating control valves, additionally it can limit noise and simplify the balancing procedure. TA-PILOT-R is a differential pressure controller for use in return pipes. Measuring points enable pressure measurements for diagnostics.

Key features

- > **Easy handling and installation**
Very low weight and small overall proportions.
- > **Precise and stable differential pressure control**
Unrivaled accuracy thanks to the new PILOT technology.
- > **Measuring and system diagnostics**
Unique features to validate and better understand system behaviour to minimize energy consumption.

Technical description

Application:

Heating and cooling systems.
Installation in the return pipe.

Functions:

Differential pressure control
Pre-setting Δp over the load (Δp_L)
Measuring (Δp_L)

Dimensions:

DN 65-200

Pressure class:

PN 16 and PN 25

Max. differential pressure (Δp_V):

800 kPa

Setting range:

10* - 50 kPa

30* - 150 kPa

80* - 400 kPa

*) Delivery settings

Leakage rate:

Tight sealing

Temperature:

Max. working temperature:

- with measuring points, standard:
120°C

- with measuring points, double secured:
150°C

Min. working temperature: -20°C

Media:

Water and neutral fluids, water-glycol mixtures.

(For other media contact IMI Hydronic Engineering.)

Material:

Valve body: Ductile iron EN-GJS-400

Pilot body: AMETAL®

O-rings: EPDM rubber

Seat seals: EPDM/Stainless steel

Plug mechanism: Stainless steel and brass

Membrane: EPDM rubber

Springs: Stainless steel

Screws and nuts: Stainless steel

Surface treatment:

Pilot body: Non treated

Valve body: Electrophoretic painting.

Marking:

TA, IMI, DN, PN, Kvs, $T_{min/max}$, serial number, valve body material and flow direction arrow, label, Δp_L range.

Colour identification on top of the pilot:

10-50 kPa: Blue

30-150 kPa: Orange

80-400 kPa: Grey

CE-marking:

DN 65-125: CE

DN 150-200: CE 1370 *

*) Notified body.

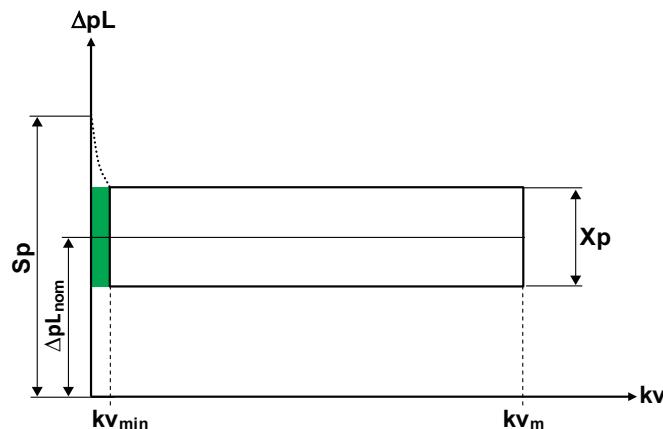

Flanges:

PN 16, PN 25: According to EN-1092-2, type 21.

Face to face length according to EN 558 series 3.

AMETAL® is the dezincification resistant alloy of IMI Hydronic Engineering.

Working range

- Sp = Sealing pressure, the increase of ΔpL in kPa when a Δp controller controls ΔpL from Kv_{min} down to zero flow.
- Kv_{min} = m^3/h at a pressure drop of 1 bar and minimum opening corresponding to the p-band.
- Kv_m = m^3/h at a pressure drop of 1 bar and maximum opening corresponding to the p-band.
- q_{max} = The maximum recommended flow through a Δp controller.
- ΔpL_{nom} = Middle value of ΔpL in the p-band.
- Xp = The p-band in kPa for ΔpL .
- ΔH = Available differential pressure.
- Δp = Pressure drop across the valve.
- q = Actual measured flow.

DN	65	80	100	125	150	200
Sp [kPa]	$\Delta H = 0\text{-}400 \text{ kPa}$			45		
	$\Delta H = 400\text{-}800 \text{ kPa}$			65		
Kv_{min}			4			
Kv_m	75	110	180	270	400	600
q_{max} [m^3/h]	53	78	127	191	283	424

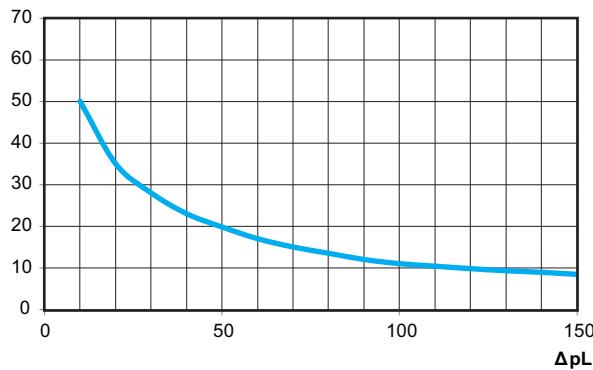

NOTE: Below Kv_{min} use expansion vessel for stable control. If Sp is within the p-band, the p-band is valid down to $Kv = 0$.

Maximum p-band in $\pm\%$ of ΔpL_{nom}

Setting range

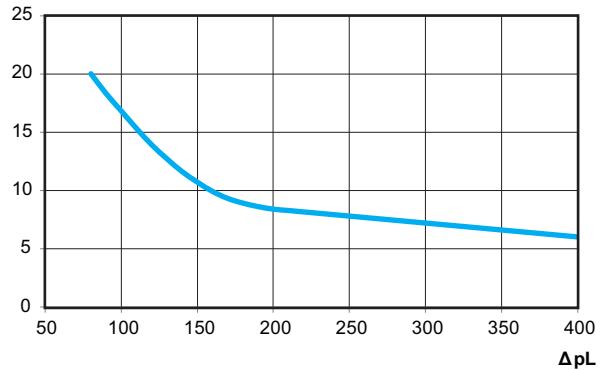

10-50 / 30-150 kPa

$\pm [\%]$

80-400 kPa

$\pm [\%]$

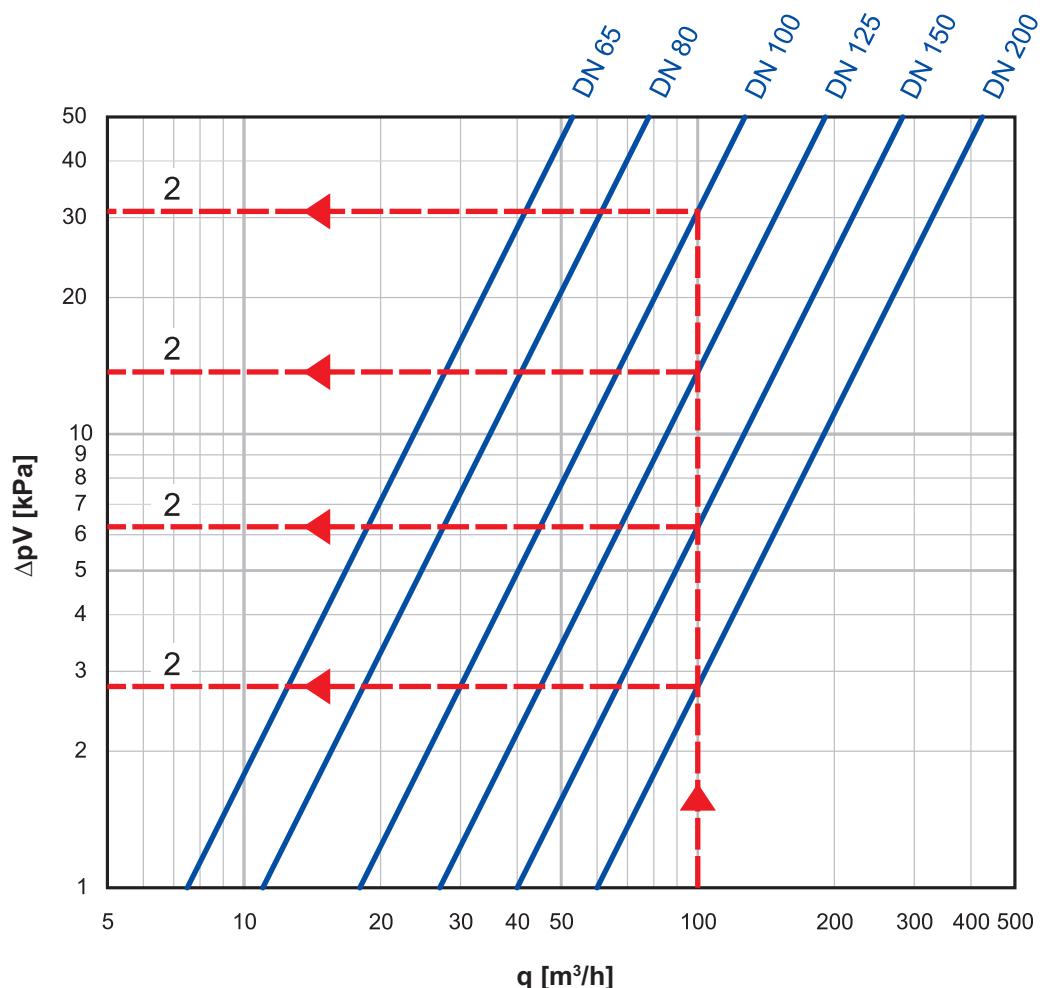

Noise

In order to avoid noise in the installation the valve must be correctly installed and the water de-aerated.

Sizing

The diagram shows the lowest pressure drop required for the TA-PILOT-R valve to be within its working range at different flows.

Example

Design flow $100 \text{ m}^3/\text{h}$, $\Delta pL = 60 \text{ kPa}$ and available differential pressure $\Delta H = 80 \text{ kPa}$.

1. Design flow (q) $100 \text{ m}^3/\text{h}$.

2. Read the minimum needed pressure drop for TA-PILOT-R ΔpV_{\min} from the diagram.

$$\text{DN } 100 \Delta pV_{\min} = 31 \text{ kPa}$$

$$\text{DN } 125 \Delta pV_{\min} = 14 \text{ kPa}$$

$$\text{DN } 150 \Delta pV_{\min} = 6 \text{ kPa}$$

$$\text{DN } 200 \Delta pV_{\min} = 2,8 \text{ kPa}$$

3. Check that the ΔpL is within the setting range for these sizes.

4. Calculate the minimum needed available differential pressure ΔH_{\min} .

Pressure drop over fully open STAF and $100 \text{ m}^3/\text{h}$,

DN 100 = 28 kPa , DN 125 = 11 kPa , DN 150 = 6 kPa and
DN 200 = 2 kPa .

$$\Delta H_{\min} = \Delta pV_{\text{STAF}} + \Delta pL + \Delta pV_{\min}$$

$$\text{DN } 100: \Delta H_{\min} = 28 + 60 + 31 = 119 \text{ kPa}$$

$$\text{DN } 125: \Delta H_{\min} = 11 + 60 + 14 = 85 \text{ kPa}$$

$$\text{DN } 150: \Delta H_{\min} = 6 + 60 + 6 = 72 \text{ kPa}$$

$$\text{DN } 200: \Delta H_{\min} = 2 + 60 + 2,8 = 64,8 \text{ kPa}$$

5. In order to optimise the control function of the TA-PILOT-R select the smallest possible valve, in this case DN 150.
(DN 100 and DN 125 are not suitable since $\Delta H_{\min} = 119$ and 85 kPa and the available differential pressure only 80 kPa .)

When to use expansion vessel

Example

Given:

Minimum flow $q_{\min} = 6 \text{ m}^3/\text{h}$

Design pressure drop of the load $\Delta pL = 200 \text{ kPa}$

Available differential pressure at minimum flow $\Delta H_{\max} = 300 \text{ kPa}$

1. Calculate Kv_{\min} for q_{\min} at ΔH_{\max} :

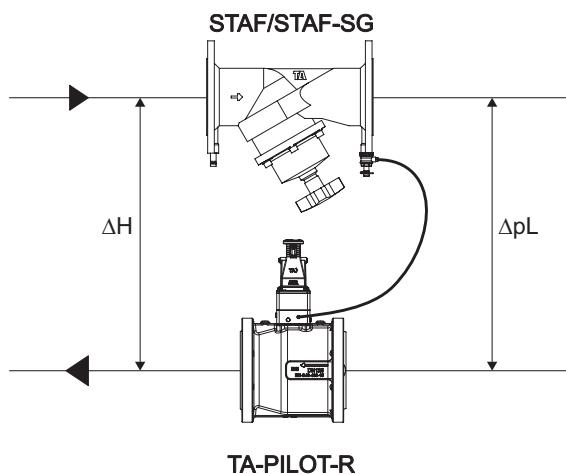

$$Kv_{\min} = 10 \cdot q_{\min} / \sqrt{(\Delta H_{\max} - \Delta pL)}$$

$$Kv_{\min} = 10 \cdot 6 / \sqrt{(300-200)} = 6$$

Kv_{\min} is **above 4**.

Expansion vessel is **not** needed.

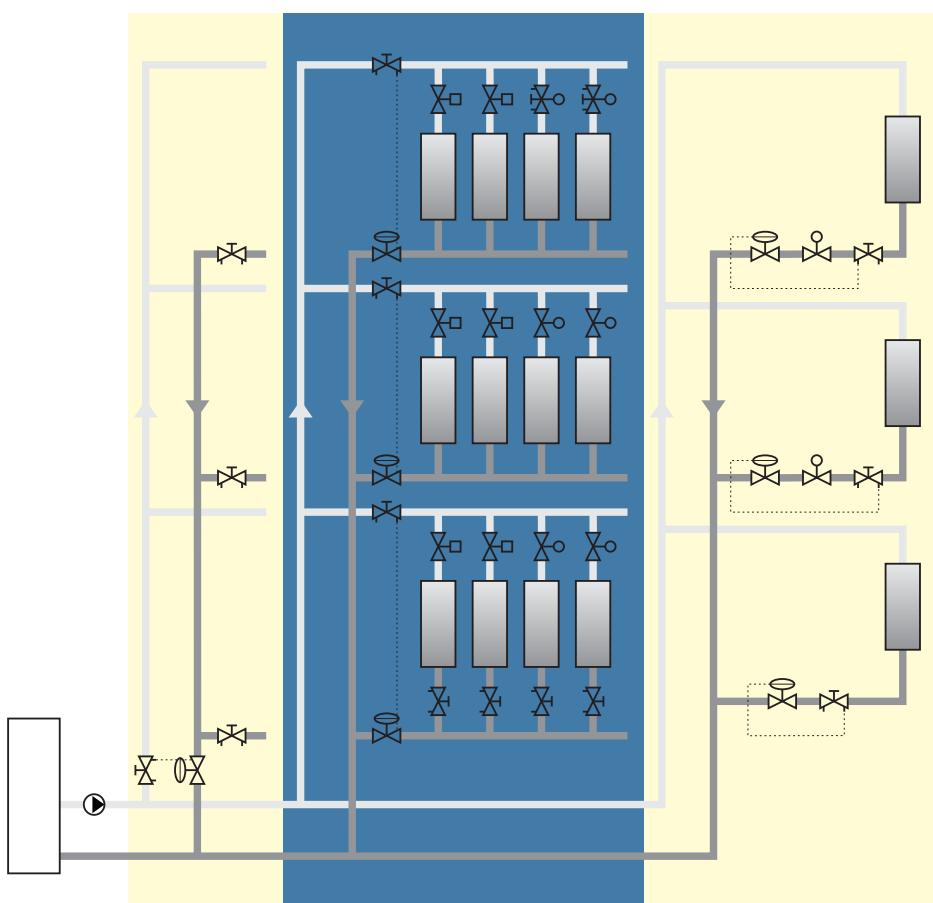

$$Kv = 10 \cdot \frac{q}{\sqrt{\Delta p}} \quad (q [\text{m}^3/\text{h}]; \Delta p [\text{kPa}])$$

IMI Hydronic Engineering recommends the software HySelect for calculating the valve size. HySelect can be downloaded from www.imi-hydronic.com.

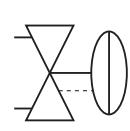

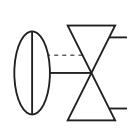

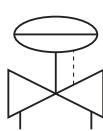

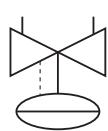

Installation

Application examples

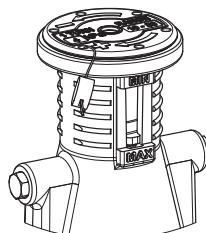

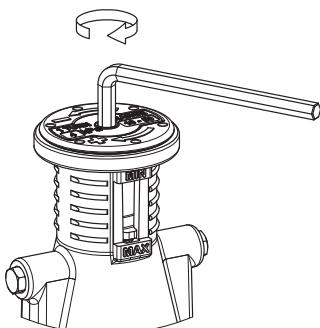

Installation of valve

Approx. 140 mm free space is required above the pilot.

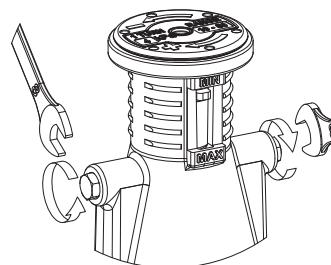

Operating function

Setting

Venting

To vent the valve, open the topmost venting screw.

NOTE! Max. 2 turns opening.

1. Use a 5 mm allen key for setting. Turn clockwise to increase the setting, see tables "Setting table" and "kPa/turn". Each rib on the pilot correspond to the different settings in the "Setting table".
2. Tamper proof the setting if necessary.

Setting table

	↙ ↘	[kPa]		
		10-50	30-150	80-400
MIN	0	10*	30*	80*
-	2,5	20	60	160
-	5	30	90	240
-	7,5	40	120	320
MAX	10	50	150	400

*) Delivery setting.

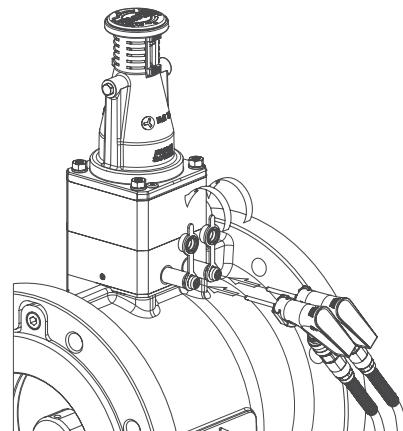

kPa/turn

10-50	30-150	80-400
4 kPa	12 kPa	32 kPa

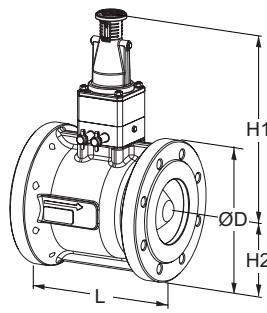

kPa/turn is also marked on the top of the pilot.

Measuring ΔpL

Connect IMI TA balancing instrument to the measuring points and measure ΔpL .
